

Yarra Valley Water

Staff locker storage with digital lock systems for a flexible, activity-based workplace

Client context

Large utilities organisation with approximately 800 staff
Transitioning to flexible work and hot-desk arrangements
Staff no longer assigned permanent desks
Shared workspaces requiring regular clearing and cleaning
Storage availability directly affects daily office usability

The operational problem

Traditional desk-based storage no longer viable under flexible work models
Staff needing secure personal storage during short, irregular office attendance
Desks required to be fully cleared at the end of each day
Storage needed to be easily accessible throughout the workplace
Locker systems required to operate reliably with minimal maintenance

Design & technical requirements

Lockers with suitable for flexible, non-assigned use supported with digital lock systems
Distributed locker clusters rather than a single central bank
Integration within office layouts without disrupting circulation
Durable finishes appropriate for frequent daily use
Mains-powered locking systems to avoid battery maintenance
Additional functional use where possible within the workspace

The response

Custom-manufactured electronic locker units designed for flexible office environments
Locker clusters distributed throughout the workplace for ease of access
Mains-powered electronic locks supporting consistent, low-maintenance operation
Free-standing units with integrated whiteboards to provide additional functionality
Precision manufacturing aligned with architectural layout and workplace planning
Close collaboration during design and engineering to support staged rollout

Outcomes

Initial deployment of approximately 115 electronic lockers
Reliable personal storage supporting flexible attendance patterns
Desks cleared and ready for shared use without friction
Reduced maintenance demands compared to battery-powered systems
Locker infrastructure positioned for future expansion

Why this matters

Staff can move in and out of the office without storage friction
Shared desks remain usable and compliant with cleaning protocols
Facilities teams avoid daily locker-related issues
Storage infrastructure supports flexible work quietly and reliably

Why AMD

Custom commercial furniture manufacturing capability
Experience delivering storage for complex workplace environments
Local production supporting quality control and design refinement
Proven collaboration with specialist locker system integrators
